

Incident Management

Simplify and centralise the management of all incidents.

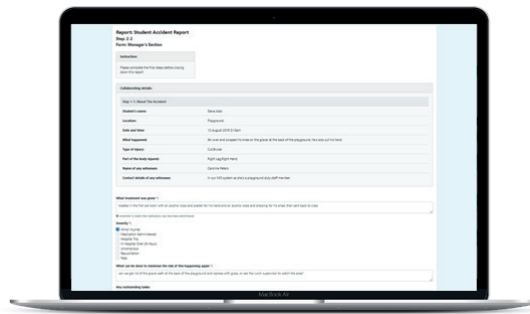

Effortlessly manage and report on incidents that may occur within a school, and alert relevant stakeholders. You can stay on top of compliance by utilising the progress area to oversee how all incidents are being dealt with. Comprehensive reports give you peace of mind, so you know everything is being actioned appropriately.

Automated and accurate

Easily generate customisable forms that are combined to create reports and predefine the workflow of different types of incidents. Staff members can complete forms via the portal with auto-populated fields from imported data, so the information entered is instantaneous and accurate.

Stay compliant

Thanks to SLAs (Service Level Agreements) you control the parameters of your incident workflow. Guarantee each step is actioned and approved in the order you need to ensure nothing is missed and you adhere to statutory regulation. Better still, automated email reminders to managers ensure tasks get done swiftly.

Effortlessly track progress

Managers can track the stages of all incidents at a glance using the progress area. All historic incidents and actions are stored within Parago to prove compliance and protect you from potential legal action against the school or trust.

Key takeaways:

- 1 | Store all historic data to evidence compliance, and access it easily
- 2 | Create a workflow that suits your organisation with customisable forms
- 3 | Track and manage each stage of an incident

"With Parago, we can [...] help with the development of the system to meet our needs and those of others. The fact that the team is so personable, willing to take constructive feedback and to have a partnership with us was one of the biggest factors in our decision to go with Parago."

Peter Bradburn, Aspire Academy Trust
