

Multi School Account Manager

Manage district-wide compliance, standardize estate management processes, share resources and centralize contracts across all your schools

We developed the Multi School Account Manager in collaboration with districts to help you work smarter, not harder! Our software makes it easy for you to set and streamline your standards, SLAs (Service Level Agreements), resources, contracts and compliance management across your organization.

You set the standards

We know that every district operates differently. Parago provides you with the flexibility to set rules and standards across your district to achieve the optimal level of compliance, preventative maintenance, risks, incidents, central support, IT and finance.

No more endless spreadsheets or frequent site visits

Cloud and smart phone technology enable you to move away from unreliable spreadsheets that cause unnecessary work for your staff. All data entered in Parago at school-level is aggregated to reports and dashboards at district-level. Meaning you can manage and track your schools' progress from the comfort of your desk.

Measure compliance and prevent issues

You can measure, filter and analyze your data to spot central and local issues before they become a problem. Easily measure compliance across the entire organization at a glance with dashboards and reporting tools. What's more, with customizable SLAs, you can ensure compliance and risk related tasks are actioned accordingly depending on the outcome of check results at each school.

Key takeaways:

- 1 | Set your district's standards and working processes
- 2 | Define and automate workflow processes across your district
- 3 | Aggregate district-wide Dashboards and Reporting

"Parago is the only IT management system we have tried that handles a mixture of inventory assigned to staff members in multiple locations. It gives you an audit trail of each asset's history, including identifying the user when barcodes are scanned by smartphone apps."

Vince Humes, Northwest Tri County
