CIVICA

Risk Management & Forms

Easily calculate and document risk, and justify future district decisions.

Let our software help you calculate, analyze and manage risk, giving you the tools to make informed school decisions and meet compliance requirements. With Parago, you can fulfil two major requirements of education: manage the quantitative assessment of your operations, and enable your stakeholders to assess risks.

Assessment-driven action
Parago provides risk assessment tools for the vast breadth of focus required. From the assessment of locations or tasks, such as playgrounds or cleaning, to strategic assessment of their district or school. You can manage, analyze and make accurate decisions to ensure school safety and overall compliance.

Streamline your risk strategy
Digitize and transform your risk assessments into a real-time living entity, with distributed access and centralised visibility. Risk assessments can be shared with staff to ensure instant access and accountability. Your staff can be the creators and owners of their risks and give access to other staff members. This removes the single or limited points of creation traditionally seen in many organizations.

Standardize your checklists
Parago also provides parameter-driven checklists to enable you to perform compliance and 'housekeeping' risk assessments through guided forms. You set the parameters and establish your own custom forms with triggering conditions to create a specific action based on the result or outcome.

Stay in control
With intelligent forms to help you judge compliance standards, you can instantly deal with risks or checks that are flagged as inadequate or a 'fail'. Our system will automatically alert the right people to resolve the issue before it turns into a problem.

Key takeaways:

1 | Ensure continuity and high standards across your school or trust

2 | Be proactive in risk management and assessment

3 | Stay compliant with automated alerts

"I rely heavily on Parago to help manage our 36 rented properties; it makes the arduous task of keeping track of risk assessments, tenancy agreements and documenting photos so much easier."
